

RTK GNSS/INS

PolyNav 2100H/P

The PolyNav 2100H/P is a high-performance, high precision GNSS aided Inertial Navigation System (INS) family designed and built by PolyExplore Inc. The family has two options:

- Ultrahigh performance “H” version
- High performance “P” version

The system features dual frequency RTK with a centimeter-level accuracy and compact, robust design. The PolyNav 2100H/P family provides superior performance during GNSS signal outages through its tightly-coupled GNSS and INS systems. Furthermore, the system is capable of continuously generate highly accurate attitude measurements regardless of whether the platform is moving or static. The system includes a digital quadrature counter, which can be used as a distance measurement indicator (DMI) to improve the performance in GNSS challenged environments. A heave message for the marine applications is also included.

FEATURES

- Highly accurate position, velocity, acceleration, angular rate and attitude (roll, pitch, heading)
- GPS, GLONASS, Beidou, Galileo and SBAS
- Dual frequency (L1/L2) RTK
- Dual antenna for accurate heading
- 100 Hz navigation solution and raw measurement output
- Accurate attitude/heading whether the platform is static or moving
- Sensor fusion for GNSS, IMU and odometer
- ROS driver available
- System options
 - Heave message available
